SUMMARY

Experienced professional with approximately 2 years of combined IT and non-IT work background. My primary focus and passion have been in software development, where I've amassed 1 year of expertise. Proficient in HTML, CSS, JavaScript, ReactJS, Node.js, MongoDB, and Express, I excel at translating client needs into efficient, scalable solutions. My commitment to continuous improvement is evident through self-learning and adapting to evolving industry trends. With a collaborative and problem-solving approach, I thrive in delivering top-notch applications that meet client expectations and drive business growth.

EXPERIENCE

Junior Accountant,

Sai Laxmi Marketing   **Dec 2022   –   Present**

Role: -
- Sales and Purchase entry
- Voucher Entry

Software Developer,

Aloha Technology   **April 2022 - December 2022 Pune, Maharashtra**

Project: **Global Reward Solutions**

- Led to a notable increase in sales and profit, as well as an increase in the company's goodwill

Technologies Used:
- Utilized HTML, CSS, JavaScript, React JS for frontend design and Laravel, PHP, Java, and Python for backend development.

PERSONAL PROJECTS

People's Bank (Net Banking)

Personal Project • April 2023 – June 2023

Description:

- The Net Banking Project allows users to register, open a bank account, and access online banking facilities.
- Admin allocates account numbers to users who can then log in to check balances, perform fund transfers, and make dummy bill payments.
- Job posters can also register, login, and post job vacancies on the bank's careers page.
- An agent handles account allocation and login details.

Features of the Application:

- User Registration and Account Opening:
  - Users can register with the application by providing required personal information.
  - After successful registration, an admin will allocate a unique account number to the user.
  - The user can then log in using the allocated account number and a secure password.
- Account Management:
  - Users can log in and view their account details, including their account balance and transaction history.
  - They can perform fund transfers to other registered accounts within the bank.
  - The application allows users to make dummy bill payments, deducting the payment amount from their account balance.
- Job Posting:
  - Job posters can register with the application and receive login credentials.
  - Once logged in, they can create, add, update, and delete job vacancies on the bank's careers page.
  - Job seekers can view and apply for these job vacancies through the same portal.
- Agent Management:
  - Agents have access to the application to handle the allocation of account numbers and login details for customers and job posters.
  - They can register new users and job posters and assist in resolving any account-related issues.

Benefits/Outcomes:

- Convenient Banking: Users can manage their accounts online.
- Efficient Job Posting: Job posters can easily manage job vacancies.
- Real-time Information: Users can access account and job vacancy details.
- User-Friendly: Simple interface suitable for all ages.
- Data Security: Encryption and authentication ensure data safety.

Technologies used:

Front-end: ReactJS, Bootstrap, MDB(Material Design for Bootstrap), CSS, Formik Library
Back-end: NodeJS, ExpressJ S
Database: MongoDB
Other Projects: Library Management, E-Commerce Website, Time Table Generator.
